Our Products

Visual Analysis Studio analyzes and visualizes disparate data, finds hidden relationships, investigates the involvement in suspicious financial transactions, and helps detect fraud schemes.

APPULSE provides centralized support for applications running on z / OS servers.

Chancellor NEXT manages enterprise digital content and automates workflow.

Our Products

IBA Talent Constructor is a product family that effectively manages human resources.

Start Point manages product development lifecycle. Based on PTC Creo and PTC Windchill platforms.

AgronomX is an IoT platform that collects information about the field's current state via sensors, weather stations, smart devices, and satellites. Enables farmers to maximize efficiency of crop cultivation and storage.

Our Products

Automated Fare Collection System automates fare collection and provides analytics on operation of public transport. The AFC infrastructure includes card validators, paper ticket validators, onboard controllers, onboard computers, inspector terminals, POS terminals, a card issuing center, and a processing center that comprises analytical subsystem for collected data analysis.

Winner of European IT
& Software Excellence
Awards 2015

Automated Vehicle Management is a suite of hardware and software intended for automated vehicle management. The system provides transportation planning, online regulation of route traffic, automated accounting and data analysis, and reporting. IBA AVM is integrated with the IBA AFC system enabling a comprehensive automation of all management and payment processes in public transport.

Winner of European Outsourcing
Association Awards 2015
